## HIGH ACCURACY PITOT TUBES

FPT-6000 Series Starts at

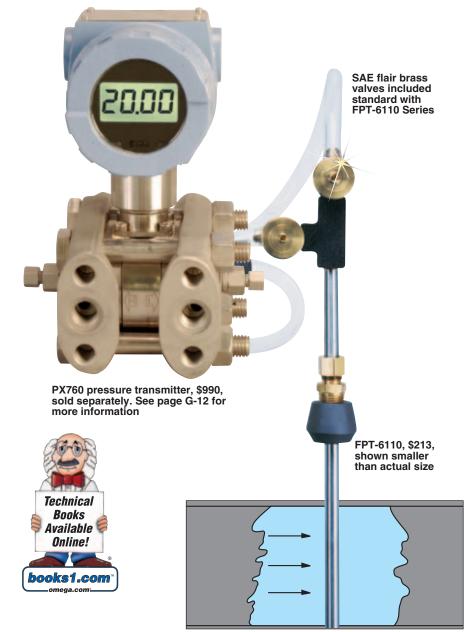

**\$213** 

- Up to ±1% of Rate Accuracy
- Easy Installation– Ideal for Retrofits
- Very Low Pressure Drop
- ✓ Low Maintenance
- For Clean, Low Viscosity Liquids, Gases, and Steam
- Valves Included as Standard

The FPT-6110 is a highly accurate averaging pitot tube which generates a pressure differential between its upstream (stagnation) ports and its downstream (static) ports that is proportional to the flowrate squared (Q²). The differential pressure can then be measured by a differential pressure transducer (see page G-12) to provide a 4 to 20 mÀ output which is proportional to the flowrate squared. This can then be read out as flowrate by devices with square root extraction, such as OMEGA's DPF64-SQRT meter or FC-20 mass flow computer. The FPT-6000 can be used to measure clean, low viscosity liquids, gases and steam in a variety of piping systems and pipe sizes (to 72" and above on special order).

The FPT-6110 offers the following advantages over orifice plates: easy, low-cost installation (weld 1 small coupling into place vs. 2 large flanges); much lower permanent pressure loss; low maintenance (occasionally forcing gas through the pressure ports clears the sensing ports when dirt is a problem); and good resistance to wear. Bi-directional flow measurement capability is standard. And, with special double-mount construction, the flow ranges listed can be extended by to up to 4 times (consult Flow Engineering Department for details).

### **SPECIFICATIONS**

Accuracy: Up to 1% of rate (see sizing). (Accuracy stated is for use in schedule 40 pipe. If used in schedule 80 pipe, add 1% to accuracy or request special construction)

Repeatability: ±0.1% of rate
Max Temperature: FPT-6100: 93°C
(200°F); FPT-6200: 204°C (400°F)
Max Pressure: FPT-6100: 150 psig;

FPT-6200: 1500 psig

Unrecoverable Pressure Drop (inches H<sub>2</sub>O): = DP x (CP/D) where: DP = generated differential pressure

(inches H<sub>2</sub>O) CP = pressure loss coefficient

= 0.296 for %" diameter probe

= 0.387 for ½" = 0.757 for ¾"

= 0.757 101 74

= 0.945 for 1"

D = inside pipe diameter (inches)

Wetted Parts: FPT-6100: 316SS shaft, brass packing and head, carbon steel weld coupling, ¼" SAE flair brass valve; FPT-6200: 316SS shaft, packing and head, carbon steel weld coupling, ½ FNPT Carbon Steel block valves

#### **Dimensions**

For Model FPT-6100: Add 4%" to line size to determine overall length without valves. Add 7%" to line size to determine clearance required to install unit.

For Model FPT-6300: Add 8½" to line size to determine overall length without valves. Add 11½" to line size to determine clearance required to install unit

HIGH ACCURACY PITOT TUBES

Carbon steel block valves included

FPT-6220, \$571, shown smaller than actual size.

Carbon steel weld coupling included

### **Sizing Equations**

#### 1. Any Liquid:

$$\Delta P \text{ (in. H}_2O) = \frac{Q^2(GPM) \times S_f}{K^2 \times D_1^4 \times 32.14}$$

## 2. Steam or Any Gas (steam requires min $\Delta P$ of 10" $H_2O$ ):

$$\Delta P \text{ (in. H}_2 \text{O)} = \frac{Q^2 \text{(lb/hr)}}{\text{K}^2 \times D^4 \times P \times 128,900}$$

### 3. Any Gas:

$$\Delta P (in.H_2O) = \frac{Q^2 (scfm) \times S_s \times (T + 460)}{K^2 \times D_1^4 \times P \times 16,590}$$

#### Where:

 $\Delta P$  = differential pressure (in in H<sub>2</sub>O)

Q = flowrate

K = flow coefficient
 (see "how to order")

D<sub>1</sub> = inside diameter of line size (in inches for square and rectangular ducts use):

$$D_1 = \sqrt{\frac{4 \times \text{height x width}}{\pi}}$$

P = static line pressure (psia)

T = temperature (in °F)

 $\rho$  = density of medium (in pounds per cubic foot)

 $S_f = Sp. Gr. at flowing conditions$ 

 $S_s = Sp. Gr. at 15°C (60°F)$ 

**NOTE:** Use of these equations for liquids yields an accuracy of ±2% of rate. When used for steam, accuracy is ±10% of rate (when steam tables are used). Gas equation yields ±2% of rate accuracy from 21 to 204°C (70 to 400°F) and 0 to 150 psig (when gas is not near its critical point). A  $\pm 1\%$ of rate accuracy requires the use of more precise equations which account for shift in K with change in flowrate, gas compressibility, etc. Request a precision flow calibration sheet and please supply the following data: name of fluid, specific gravity, pressure, temperature, inside pipe diameter, viscosity, steam quality, degrees superheat, and ratio of specific heat at constant pressure to that at constant volume (for gas velocities approaching 500 fps).

#### **Options**

Add Suffix	Additional Price	Description
-SS	\$122 for %" probe diameter	316SS construction
	168 for ½" probe diameter	
	152 for ¾" probe diameter	
	212 for 1" probe dia. and up	

Comes complete with operator's manual.

\* Max differential pressure shown is for up to 150°C (300°F). Above 150°C (300°F), reduce value by 4% per 56°C (100°F).

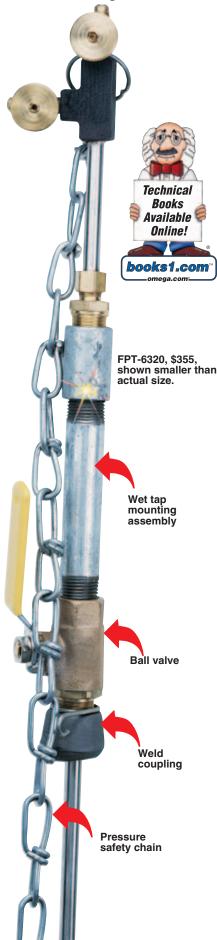

† Please complete and send in questionnaire from page G-11 with your order. For units wih stainless steel construction add "-SS" to part number and adjust price based on options above.

Ordering Examples: FPT-6220, high pressure model pitot tube, \$571. FPT-6160-SS, low pressure, %" diameter pitot tube with 316SS, \$324 + 122 = \$446.

Recommended Reference Book: Differential Pressure Flow Transmitters, FW-201, \$250. See Section Y for Additional Books

# HIGH ACCURACY PITOT TUBES

For Wet Tap Installations

FPT-6300 Series Starts at

MADE IN USA

- ✓ Up to ±1% of Rate Accuracy
- Wet Tap Assembly Permits Installation/ Removal in Live Lines
- ✓ Very Low Pressure Drop
- Low Maintenance
- For Clean, Low Viscosity Liquids, Gases, & Steam

The FPT-6300 averaging pitot tube is similar to the FPT-6100 in performance, but features a wet-tap assembly which permits installation and removal of the sensor in pressurized lines without process shutdown.

The weld coupling is first welded into place, then the ball valve and packing are put in place. Next, a drill is used to drill out the pipe. The drill is partially withdrawn and the ball valve is closed. The drill may then be completely removed and the sensing tube partially installed in the assembly. Finally, the ball valve is opened and the sensing tube is inserted into the flowstream. The FPT-6300 is ideal for retrofits on critical flowstreams.

### SPECIFICATIONS

Accuracy, Repeatability and Unrecoverable Pressure Drop: Same as the FPT-6100 series

Max Temperature/Pressure: 88°C (190°F) at 150 psig operating; 88°C (190°F) at 100 psig during insertion or removal

#### **Wetted Parts:**

Carbon steel weld coupling and pipe fittings, brass ball valve and packing, and Zytel ferrule. For 316SS construction, consult Flow Engineering Department.
